## 1 CHANGE LOG v1.5

InnerStmt lze nově rozgenerovat na: ReturnStmt, ExitStmt a ContinueStmt. To způsobí, že půjde příkazy RETURN, EXIT a CONTINUE použít uvnitř složeného příkazu(if, scope, . . .), ale navíc přibude povinnost kontrolovat, zda není RETURN použit mimo funkci (nebo EXIT a CONTINUE mimo cyklus).

## 2 LL Grammar IFJ17 (v1.5)

## 3 Komentář

- Neterminály: Psány kurzívou (Statement, Expression, ...).
- **TERMINÁLY(TOKENY)**: Terminály (**IF**, **LOOP**, ...) psány VELKÝMI PÍSMENY a vyznačeny **tučně**. Nepísmenné terminály ('=', '(', ')', ...) vyznačeny 'uvozovkami'.
